Ascot Chair High Leg Lift
with NHC Cyclo-Therapy®

ADJUSTAMATIC
COMFORT YOU CONTROL

Ascot High Leg Lift

The Ascot riser recliner chair is a result of our continual research and development to deliver beautiful furniture that can complement any environment whilst simultaneously providing unrivalled quality and superior long-term health benefits.

Aside from distinct flowing lines and handcrafted solid wood knuckle arms, the Ascot also benefits from a Tilt-in-Space steel frame. The ideal comfort as you recline, when the backrest reclines the leg rest elevates at the same time keeping your sitting posture at a natural angle. The height of the extra high leg lift means your legs lift higher than your hips and in line with your heart, ideal for aiding healthy circulation. If you suffer with or have had heart disease, chest pain or angina raising your ankles in line with your heart, takes the pressure off your heart and it can pump blood around your body more easily. If you have a build-up of fluid in your legs and ankles you by applying Cyclo-Therapy® and raising them with our high leg lift footrest will not only properly support your legs and joints but also help to reduce any swelling in your legs. The Ascot chair's movement distributes weight without you having to adjust your hip and knee angles keeping the whole body in a neutral zero gravity position that provides, unsurpassed comfort, and help alleviate a wide range of medical conditions.

Tilt-in-Space frame

Tilt-in-Space is important if you need to relieve pressure and soreness. The whole chair reclines – the backrest supports your lower back, and your weight spreads evenly through your whole seat. The Ascot Tilt-in-Space mechanism allows the angle between the chair seat and the back to be maintained as the chair reclines.

Key product benefits
